
User accounts
EOA
controlled by a private key
EIP-7702 account
an EOA that delegates to code
Smart account
a Safe or an ERC-4337 account
send transactions, which pay gas; no node of any graph
Contracts
every other contract account; they run the code the transaction calls
A token contract's emit runs its LOG instruction: Approval and Transfer events.
writing to storage leaves no log
Logs
Approval(owner, spender, value)
Transfer(from, to, value)
permanent; any full node or index provider can recompute them
What the study reads
both ends are contracts: an edge of the contract graph
a user account at one end: no edge; it enters only as importance and in the labels
