1 A crawl in progress

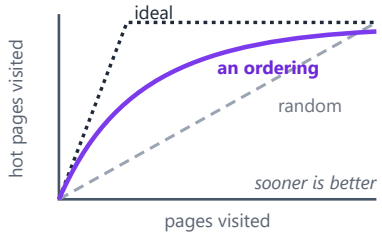

2 Ordering of the frontier

each uses only the pages read so far

- **a Breadth-first order**
  the page found earliest first
- **b Backlink count**
  the most links from read pages first
- **c PageRank**
  computed on the read pages

3 Discovery curve schematic

In this thesis, the discovery-order test

page → contract

link → allowance or transfer edge between two contracts

hot pages → contracts with the most user-account demand, which no ordering reads

orderings → breadth-first, contract backlinks, walks such as C-PR
