
1 Introduction the problem, objectives O1–O5 and research questions RQ1–RQ5
2 Literature review
on-chain reputation
crawl ordering
ERC-20 allowances
reputation tooling in DeFi
theoretical framework
3 Methodology
account types, tokens, prices
contract graph, balance cap
the scores
discovery-order test
holdouts, checks, timing
reproducibility, ethics
4 Results
data of the contract graph
benchmark C6
same window, divergence C5
robustness checks
discovery order C1
temporal holdouts C2
coupled walk C3 C4
5 Discussion
findings by question and objective
implications
threats to validity
limitations
6 Conclusion
answers to RQ1–RQ5
contribution to knowledge
future work
Appendices account types and balances · discovery-order test, further tables · EndorseRank and AWP side by side · the registered analysis
claims by question: RQ1 RQ2 RQ3 RQ4–5
